

'One of their philosophers has lately discovered that "as the liver secretes bile, so does the brain secrete thought"; which astonishing discovery Dr Cabanis, more lately still, in his *'Rapports du Physique et du Moral de l'Homme'*, has pushed into its minutest developments. [...] He fairly lays open our moral structure with his dissecting-knives and real metal probes; and exhibits it to the inspection of mankind, by Leeuwenhoeck microscopes and inflation with the anatomical blowpipe. Thought, he is inclined to hold, is still secreted by the brain; but then Poetry and Religion (and it is really worth knowing) are "a product of the smaller intestines!"[note]Thomas Carlyle, 'Signs of the Times', in *Edinburgh Times* (1829).[/note]
